

Based Upon: PCT/EP2004/000122

ABSTRACT OF THE DISCLOSURE

A soft heating device such as a heat blanket, heat cushion or heat feather-bed, having at least one heating cord arranged on a base heating element, a connection cable for an energy supply connected by an externally insulated connecting means, and a control circuit. The heating device has a robust structure because the connecting means are grouped together in a connecting unit comprising a common carrier plate and/or a common encapsulating element.
